Zyzo Technology Services, LLC is a small business providing custom software development for government and commercial clients. We specialize in web, mobile, database, and API solutions, with experience in infrastructure and transportation systems.

Core Competencies

- **Custom Software Development** – Full-stack solutions using modern frameworks (React, Node.js, Laravel, PHP/Yii, Postgres, MariaDB).
- **Enterprise Systems & Data Integration** – Secure REST APIs, data pipelines, and interoperability across legacy and cloud systems.
- **Mobile & Field Applications** – Offline-ready inspection and documentation apps with media capture, sync, and reporting features.
- **Geospatial Solutions** – Esri ArcGIS integrations, interactive mapping tools, and automated PDF reporting.
- **Analytics & Decision Support** – KPI dashboards, statistical pay factor models, risk assessment tools, and project cost estimating software.
- **Compliance & Standards** – WCAG/ADA accessibility, and Buy Clean California Act (BCCA) support.

Past Performance

- **State Departments of Transportation** – Delivery of software platforms supporting materials testing, inspection workflows, and data reporting.
- **Regional Transit & Infrastructure Programs** – Development of tools to improve efficiency in project documentation, reporting, and data sharing.
- **Private Engineering Firms** – Custom software solutions for inspection data management, GIS integrations, and PDF reporting.

Differentiators

- **Deep Technical Expertise** – Proven experience across web, mobile, API, and database technologies.
- **Sector Knowledge** – Understanding of infrastructure, transportation, and construction workflows paired with modern software practices.
- **Agile & Scalable Delivery** – Experience executing projects in sprints with transparent reporting and rapid iteration.
- **Innovation Mindset** – Ongoing development of modular SaaS platforms that address the unique needs of DOTs, labs, and engineering firms.
- **Efficiency-Driven** – Focus on reducing costs and streamlining client operations through automation and smart software design.
